Our Project

- **Target Audience**

- People with disabilities and their friends
- Individuals frustrated by the lack of reliable, up-to-date accessibility information for public venues

- **Our Solution**

- A web app that scores and ranks social venues based on accessibility
- Provides clear accessibility ratings (1–10)
- Delivers current and reliable accessibility information

- **What Makes It Different**

- Focused specifically on accessibility
- Combines accessibility scoring with community feedback
- Offers a user-friendly and comprehensive experience

- **Additional Features**

- Organize and join group activities
- Promote inclusive and enjoyable social events for everyone

The App

Built Around 4 Personnas

- **Sylvia:** Regular user
 - Browse venues, rate accessibility, write reviews, save favorites, manage her profile
- **Paul:** Social venue owner
 - Register and manage his venue, upload photos, respond to user reviews
- **Thia:** Event organizer
 - Search accessible venues, create and manage inclusive events
- **Mark:** App administrator
 - Delete or ban users

MVP - Core Feature Implemented

Authentication & Profiles

- User registration and login
- Role-based access
- Profile page

Venue Management

- Venue listing and detail pages
- Venue creation and editing by owners
- Accessibility score display

Reviews & Ratings

- 1–10 rating system across 3 dimensions (event in general, accessibility, service)

Event Management

- Event listing and detail pages
- Event creation, editing, and deletion by organizers

Admin & Moderation

- User banning and management
- Review moderation and soft-deletion

Agile Tool

Github Project

We used github project for a kanban board for tracking the tickets

Backlog	In Progress	Need review / feedback	Done

Tracking method:
GitHub issues act as Stories and Tasks (via labels)
GitHub Milestones act as Epics

Agile Tool

Sprints

Scrum-inspired with 4 sprints

Devision of the issues and milestone by sprints

Clean Code Principles

- **Code Quality**

- Configured via ESLint
- Ensure consistent use of type imports
- Prettier for consistent formatting

- **Separation of Content**

- Clear separation between elements (components, business logic, database access, ...)

- **Reusable UI Components**

- **Database Integrity**

- Prisma ORM

- **GitHub discipline**

- Conventional Commits
- “feature/”, “fix/”, “chore/” branches
- Pull Request review
